

FIRST DATA FD200 TERMINAL

First Data FD200 Point-of-Sale (POS) System

Check out the new FD-200 from First Data. This all-in-one Check acceptance machine is ideal for many merchants and makes payment options simple, straight forward and time saving for customers. Now you as a merchant can provide more payment options to your customers without adding complexity or large bulky devices.

The FD-200 replaces the older Eclipse terminal and has been re-engineered from the ground up. Check out these amazing features... Credit, Debit, Gift Cards, EBT, and Check Acceptance which save merchants time and money.

The FD-200 also offers 2 printers. A thermal printer for receipts and an inkjet printer to void checks. Eliminating the ink jet printer for receipts will greatly reduce a merchants ink costs and printing times. Note: Eclipse merchants who upgrade to the FD-200 can use their Eclipse inkjet with the FD-200, which provides a smooth easy transition to this new terminal.

Another great feature is it's Internet Protocol (IP), dial-up, or (optional) WiFi communications. The advanced built-in check reader/imager supports TeleCheck ECA service, including warranty and verification options.

Upgrading to the FD-200 is fast and simple, requiring only 1 minute to download.

The FD200 terminal allows you to process all types of payment methods that traditionally take several devices to handle. This virtually eliminates the need to use all the other equipment and trade all of those items for one simple device. Not only does this take up less counter space, but use the WiFi (optional), Internet Protocol (IP), or Dial-up communications to fit your needs.

The FD200 quickly processes your transactions. And get this.. There is a built in check reader/imager as well which supports the TeleCheck® ECA® and Lockbox services, which offer merchants a comprehensive solution for check acceptance.
