

TELECHECK ECLIPSE

Telecheck Eclipse

The TeleCheck Eclipse Terminal is a sleek payment terminal that transfers a multi-payment option nightmare into a dream come true by eliminating the need for different terminals to authorize and process checks, credit and debit cards, and EBT transactions. Several features include: a built-in ink jet printer, touch-screen interface and an innovative check imaging system. The Eclipse payment terminal allows you to convert paper checks into electronic items at the point of sale and delivers funds directly to your merchant account, cutting paperwork and improving cash flow.

Supports all non-cash payment options -
Checks, credit and debit cards, EBT merchant transactions

Instant authorizations and state-of-the-art check reader - Converts paper checks into electronic items, reducing error and fraud

Stores up to 500 check and 300 card transactions

Check imaging allows you to process checks without identification in most cases

Automatic bank deposits - No need to take checks and deposit them into your bank account, this is done automatically, just process the check and give it back to the customer as a receipt.

With TeleCheck Eclipse, you get it all: the ability to process all major credit and debit cards, stored value cards and even accept checks. With TeleCheck Eclipse and the Electronic Check Acceptance service, you don't have to worry about whether a check will clear. That's because once you run a check through our TeleCheck terminal, it's been approved and the customer has signed the receipt.

That means you won't see any NSF notifications or accompanying return fees. And your customers will be happy, too. TeleCheck gives them the same float time their banks allow and helps protect their checking accounts from unauthorized use.
